Motorization, for all awnings

More technology, more connectivity, more control: introducing the new generation of smart awnings

Designed for any type of awning, like invisible arm or cassette, it allows manual end position configuration or pressure closure. Thanks to its star-shaped head, it is compatible with all awning hardware.

Ready to change the market game

Its powerful Wi-Fi integrated circuit allows a direct connection to your mobile phone or voice assistant, without the need for a HUB. Includes a quick connector for a superior installation.

Outstanding in security due to its back release function, which automatically adjusts the motor's force and performs a 1ms movement when closing by pressure, protecting the awning fabric. Furthermore, to ensure the integrity of the cassette and fabric, the motor will not perform a new pressure closure until after 25 cycles, and it adapts to the awning's size for a perfect pressure closure.

Finally, **bidirectionality in transmitters and sensors** ensures that the motor automatically retracts the awning in case of malfunctions.

Features

- \varnothing 45 mm
- Electronic end limit
- Two programming options: double end limit or pressure closure for cassette awnings
- Bidirectionality with weather sensors
- Option to deactivate the solar sensor from the transmitter
- 5-meter extension wire to avoid additional splicing
- Options for 10, 15, and 20 meter wires
- Frequency 868.3 MHz
- Moisture-resistant surface

- Bidirectional Wi-Fi technology
- Removable **EASY CONNECT®** IP65 connector for easier installation
